

Hitting Jira API using postman

Steps :

1)Generate API token from

<https://shiveshmohan.atlassian.net/jira/software/projects/PS/boards/35>

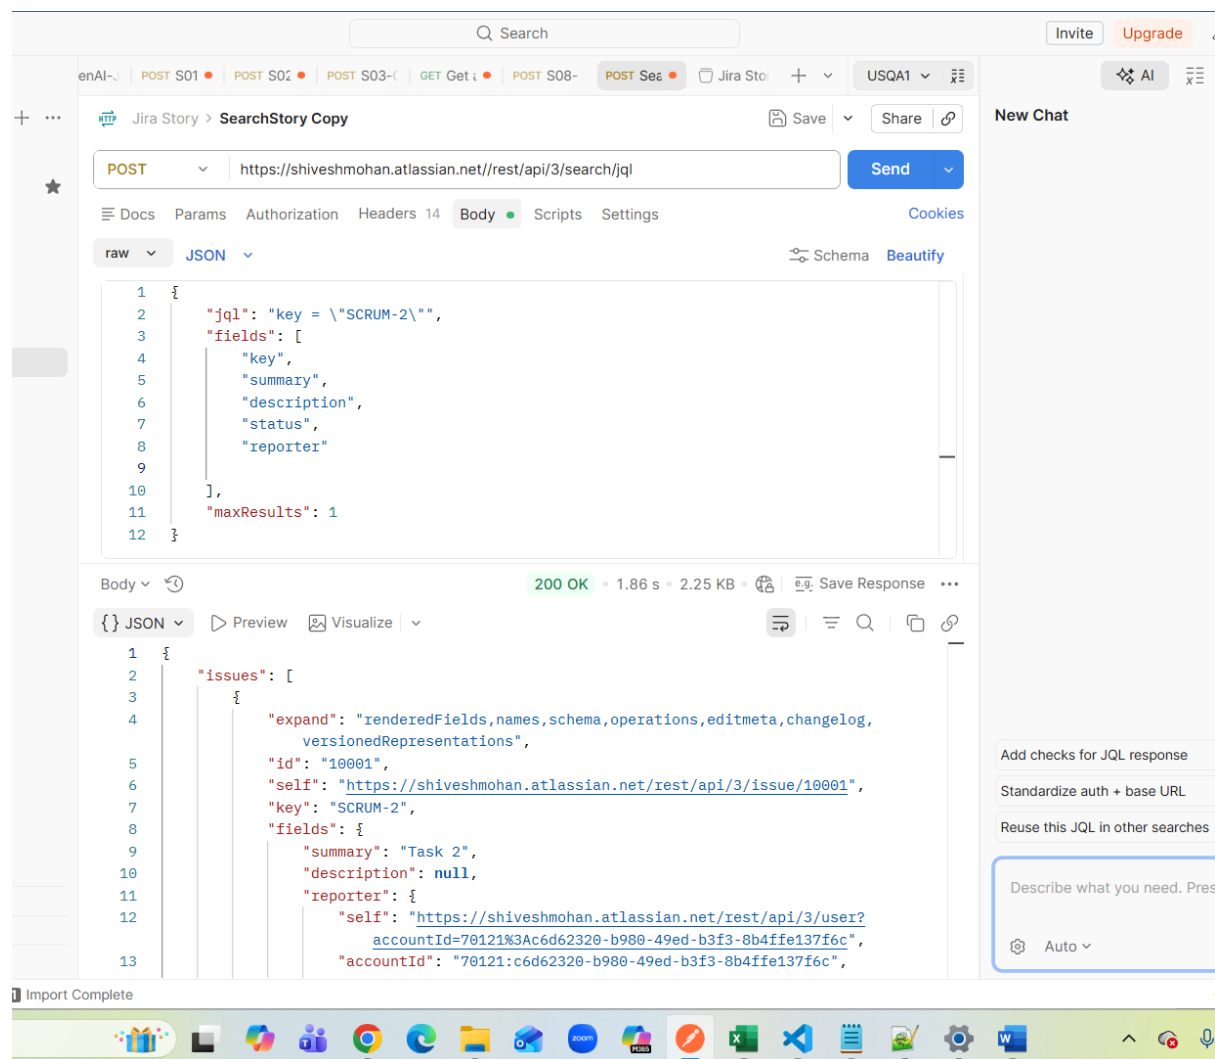

2)Click user icon link/button

3)Go to security tab and then API tokens and then create API token and copy

4)In the Postman at collection level pass Basic auth and user as signed in Jira user and token as copied from above step

5)Hit the below API and check for Scrum-2 data

Using Copilot (ask)

Prompt—

Analyse the code and show the impacted and new files for the below implementation

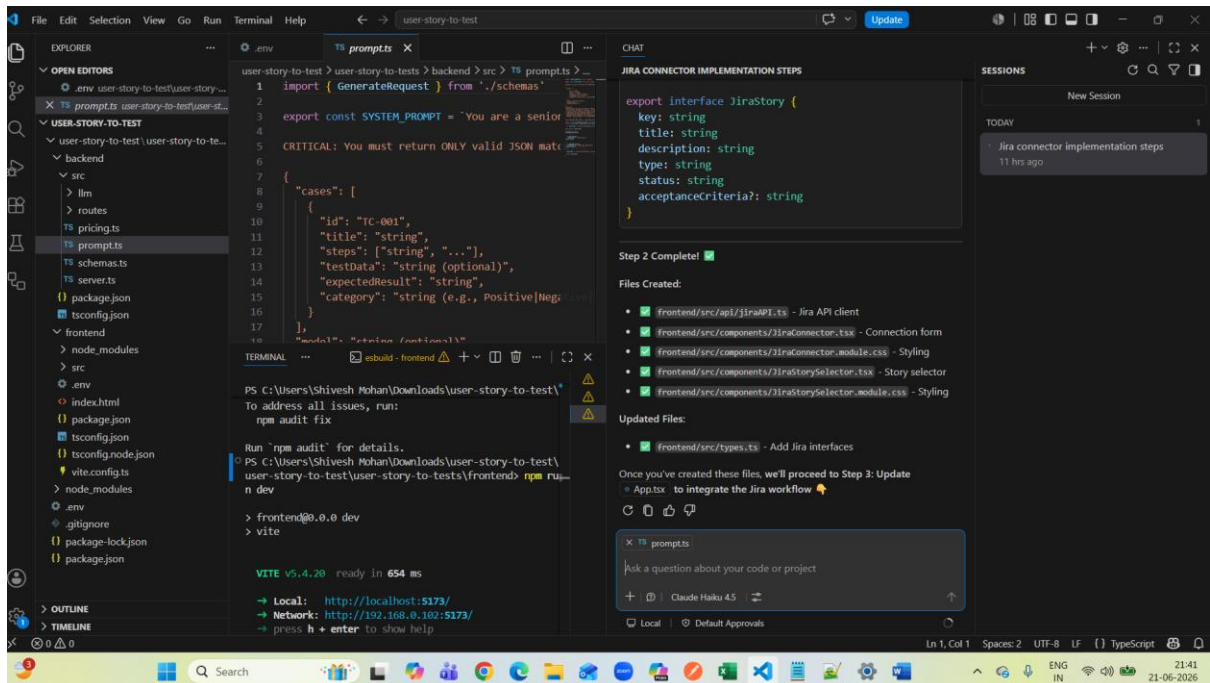

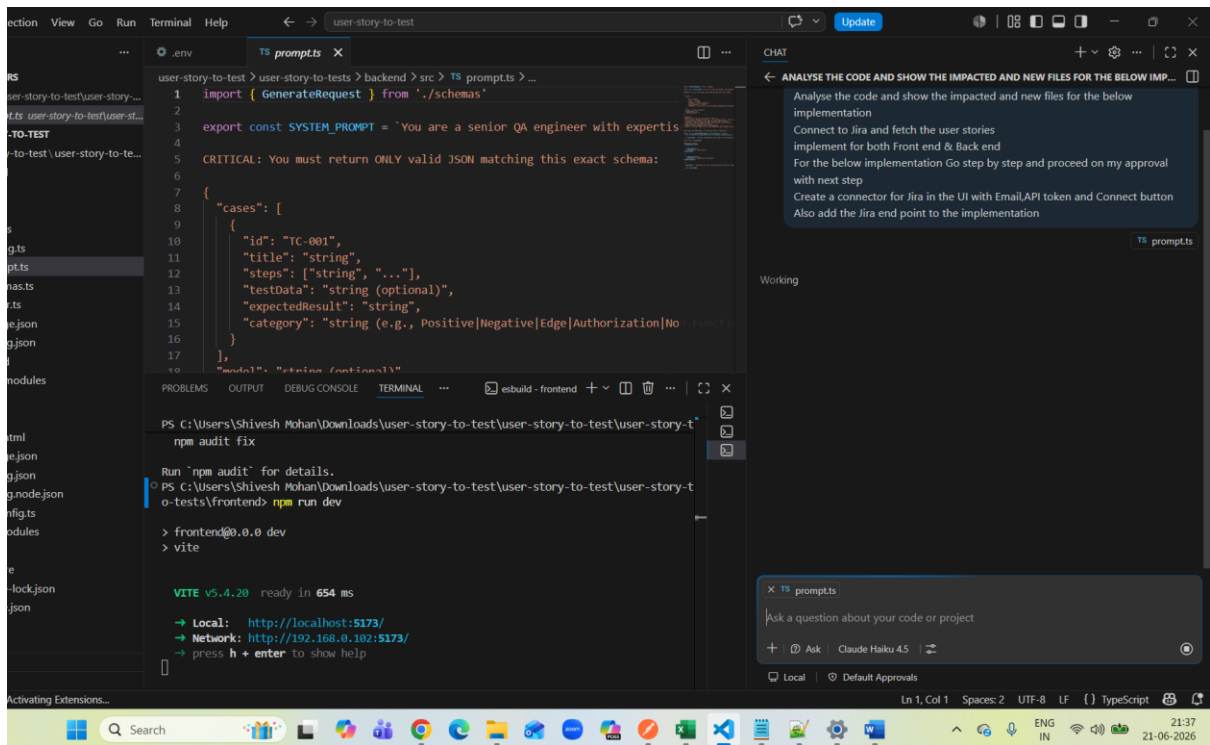

Connect to Jira and fetch the user stories

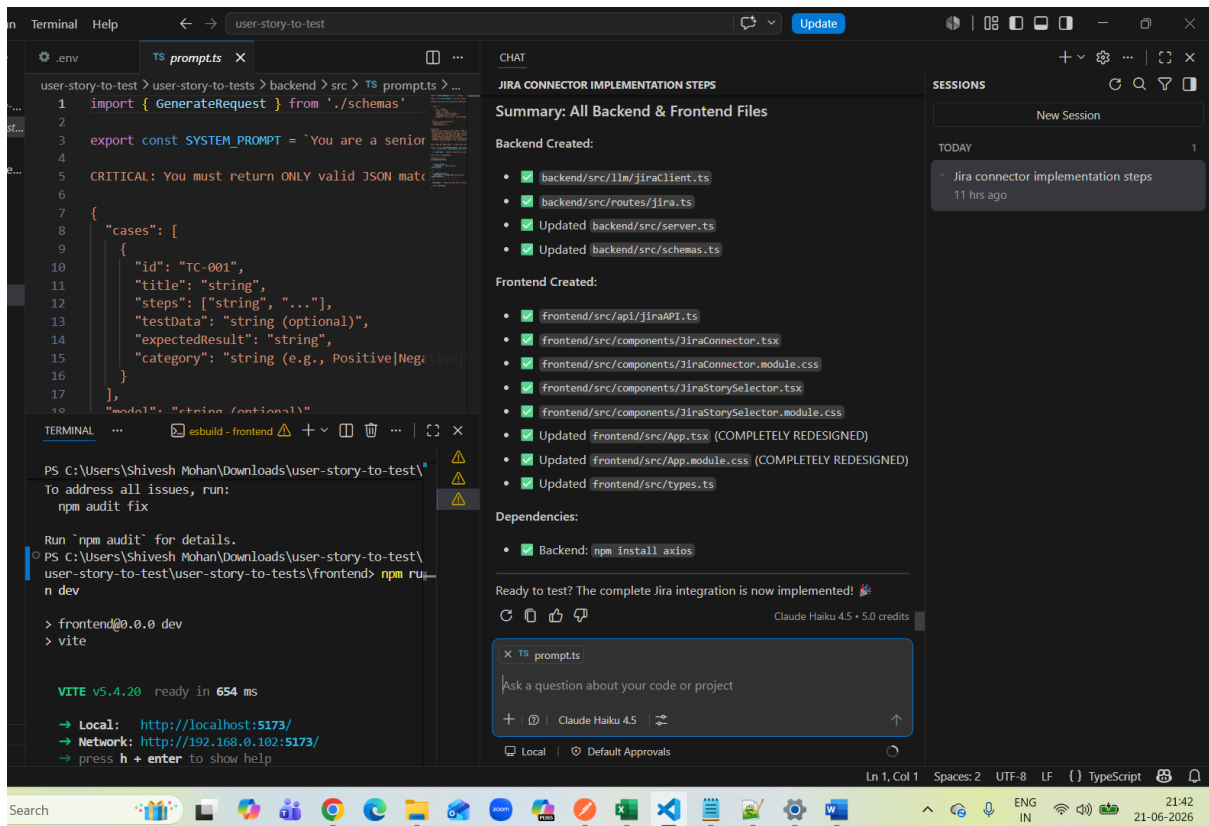

implement for both Front end & Back end

For the below implementation Go step by step and proceed on my approval with next step

Create a connector for Jira in the UI with Email,API token and Connect button

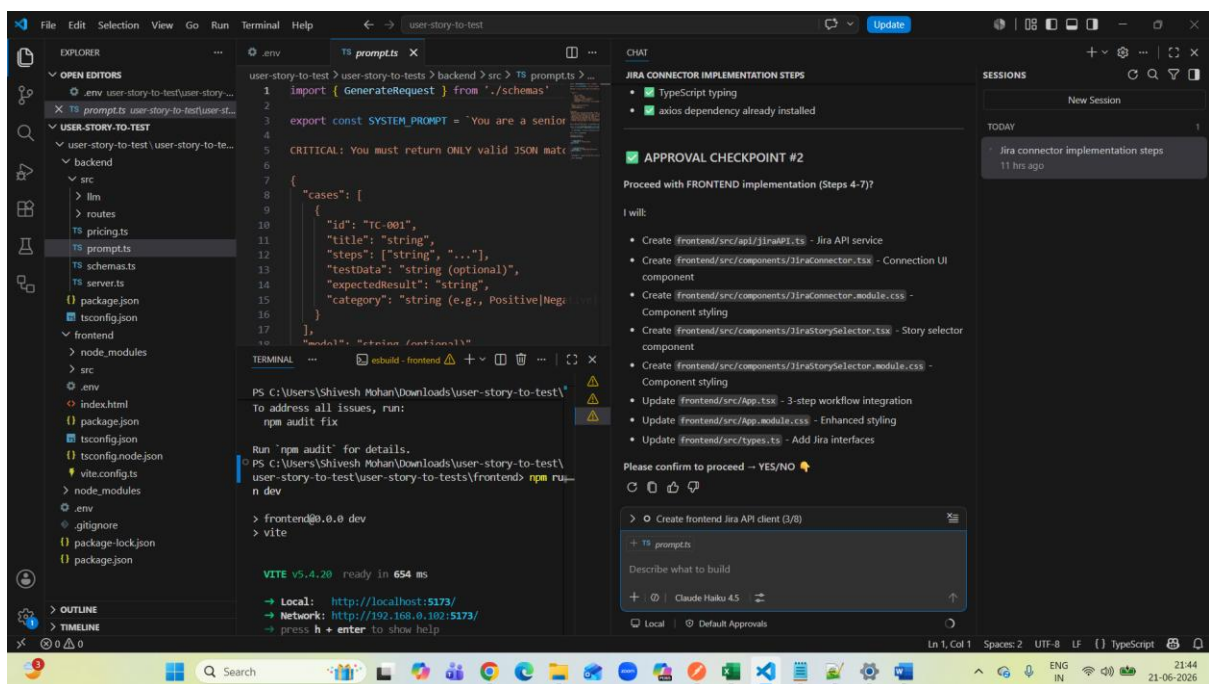

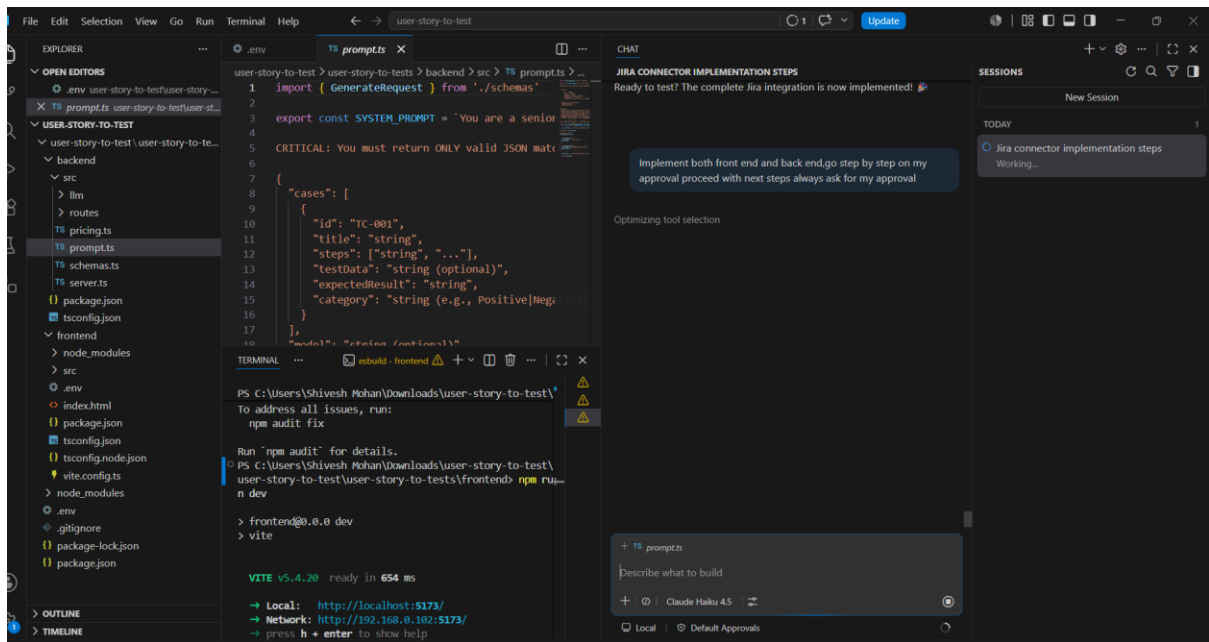

Also add the Jira end point to the implementation

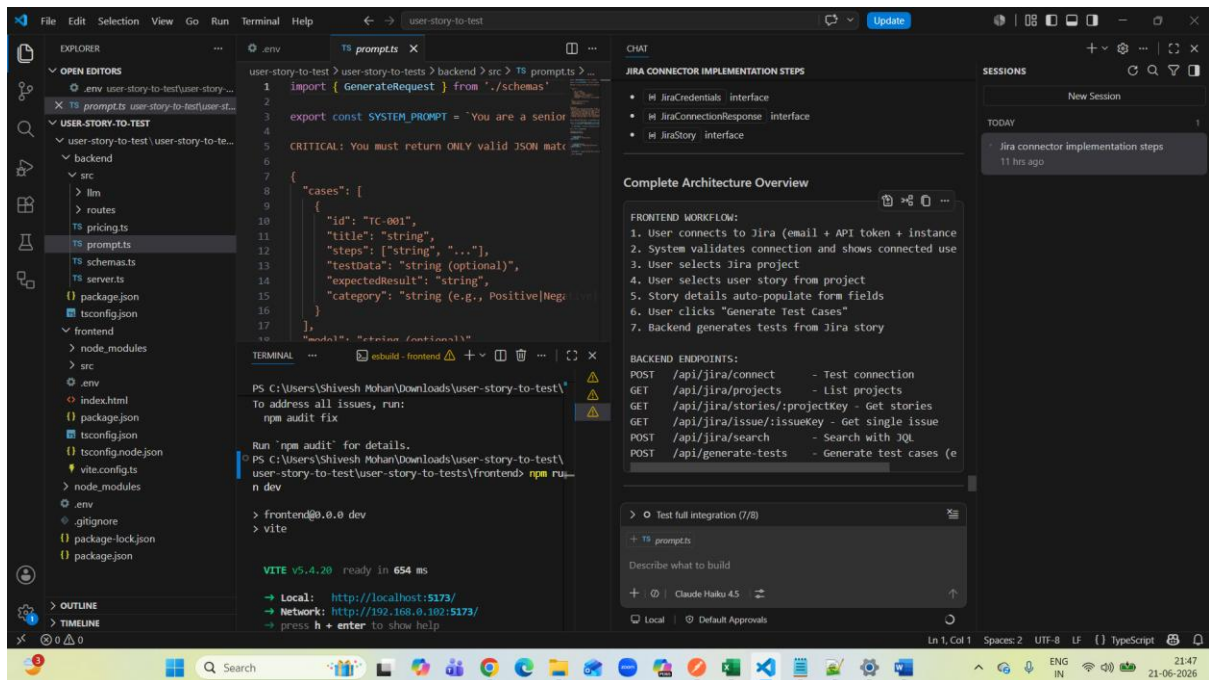

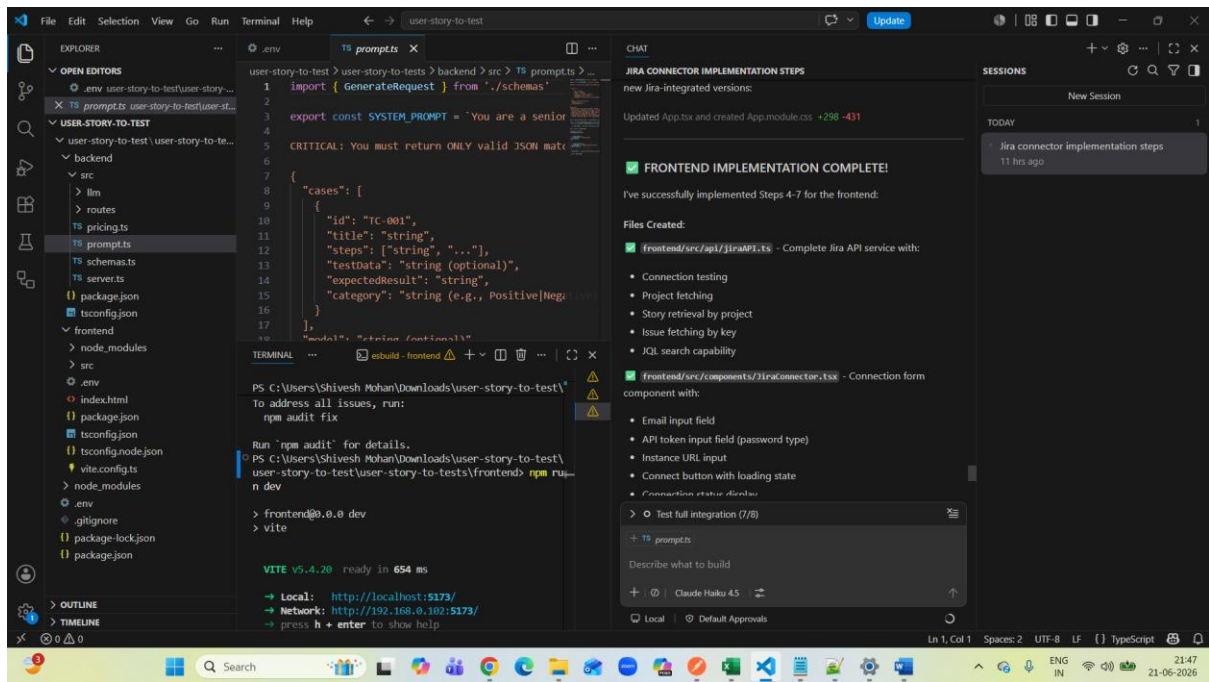

Changing/Switching to Agent mode now

Prompt : Implement both front end and back end,go step by step on my approval proceed with next steps always ask for my approval

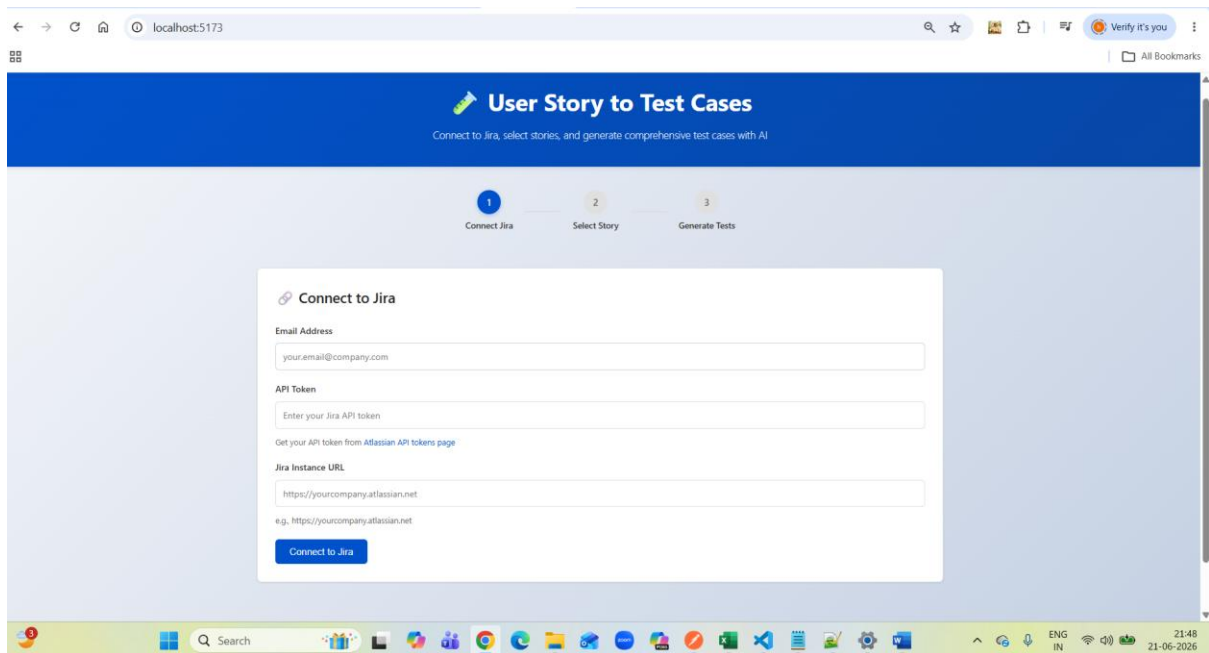

FRONTEND WORKFLOW:

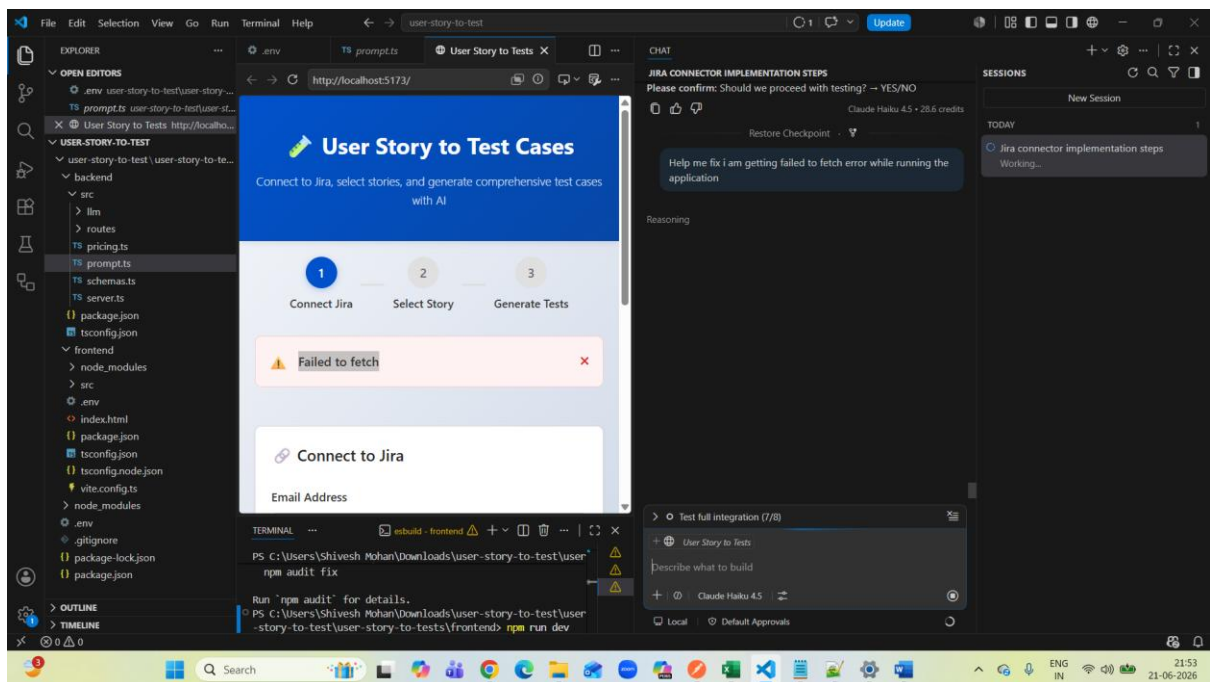

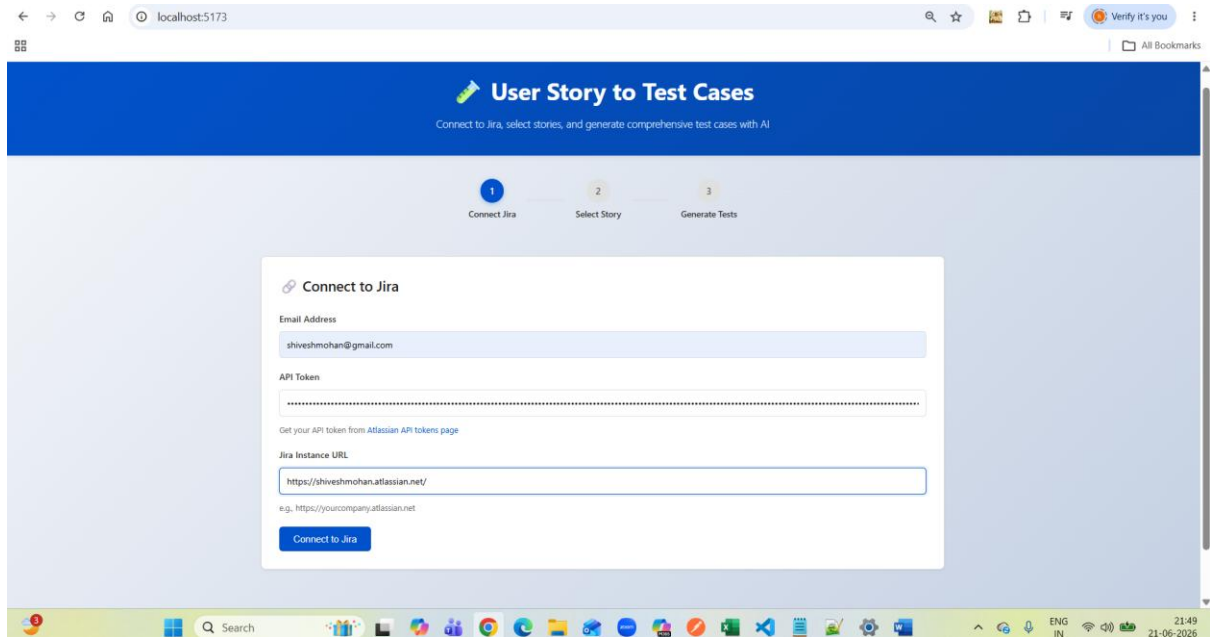

1. User connects to Jira (email + API token + instance URL)
2. System validates connection and shows connected user
3. User selects Jira project

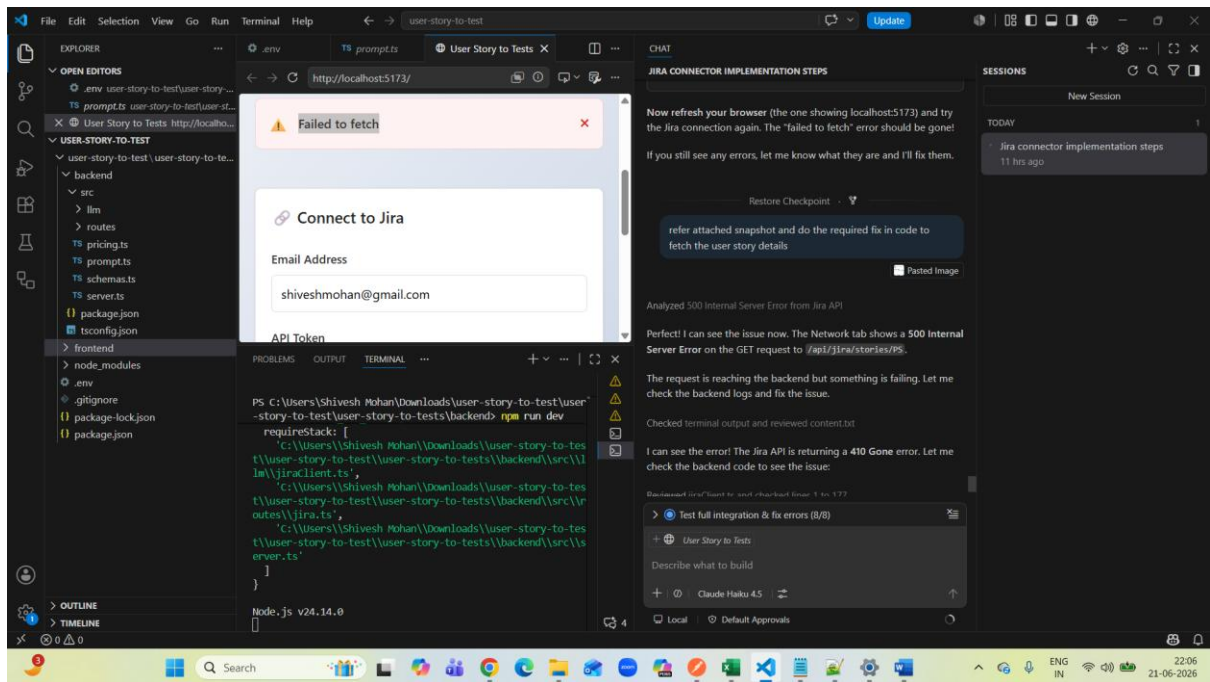

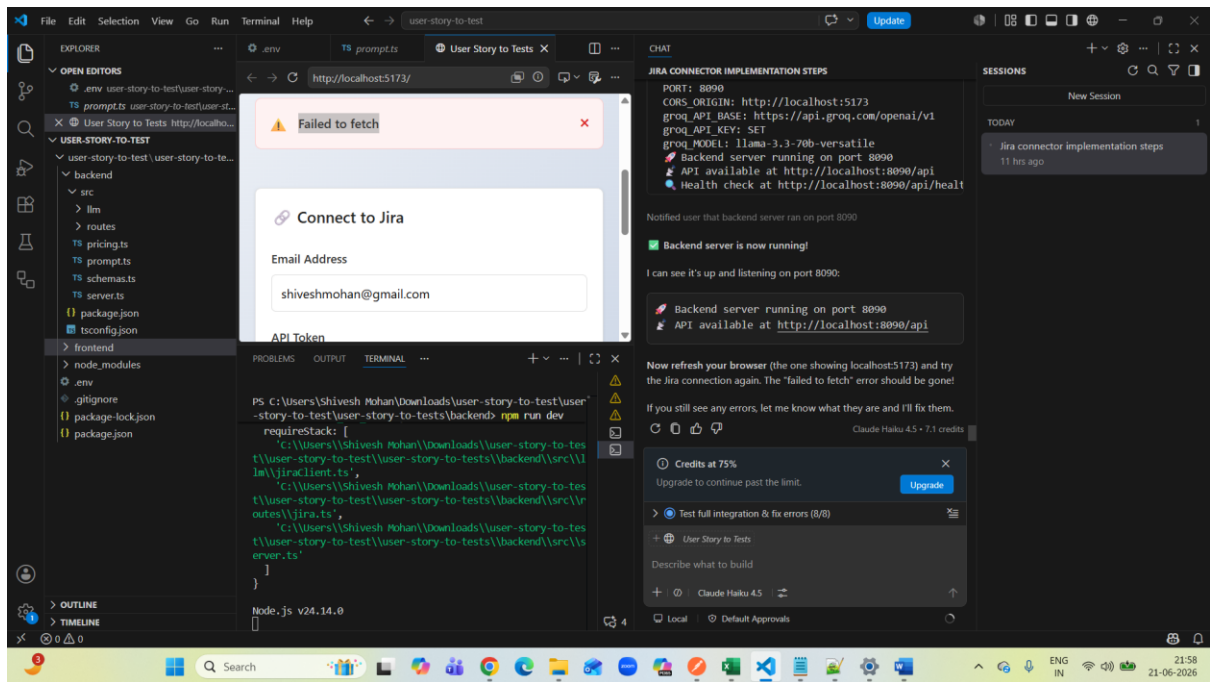

4. User selects user story from project
5. Story details auto-populate form fields
6. User clicks "Generate Test Cases"
7. Backend generates tests from Jira story

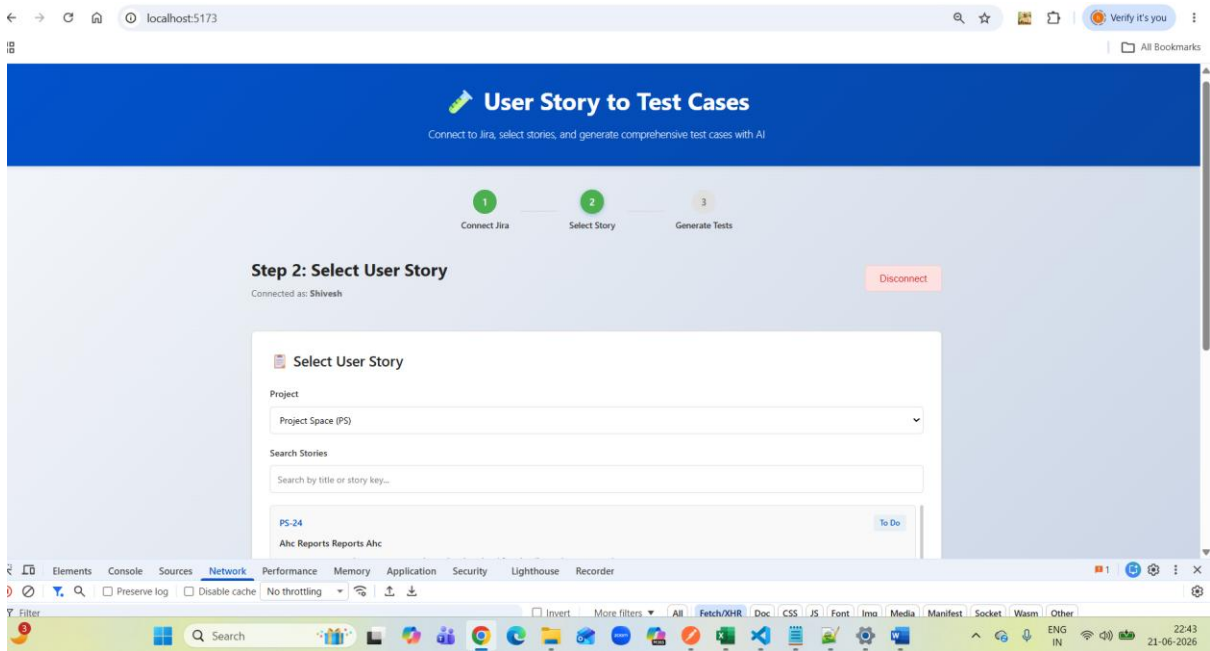

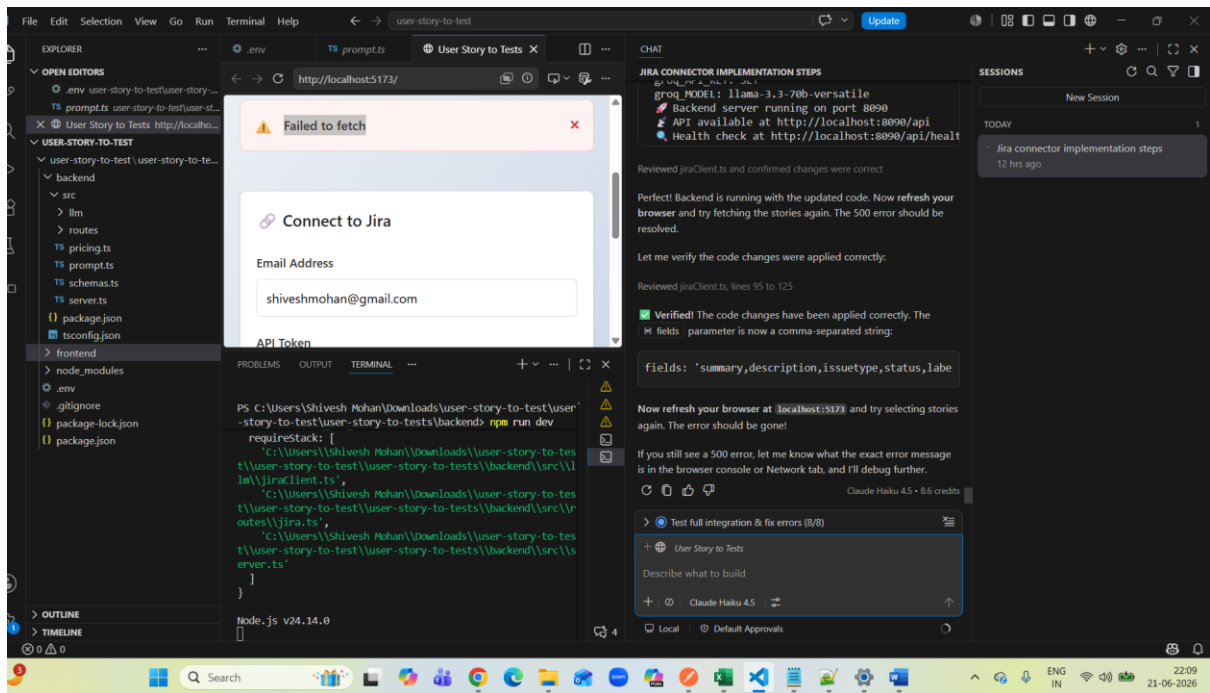

BACKEND ENDPOINTS:

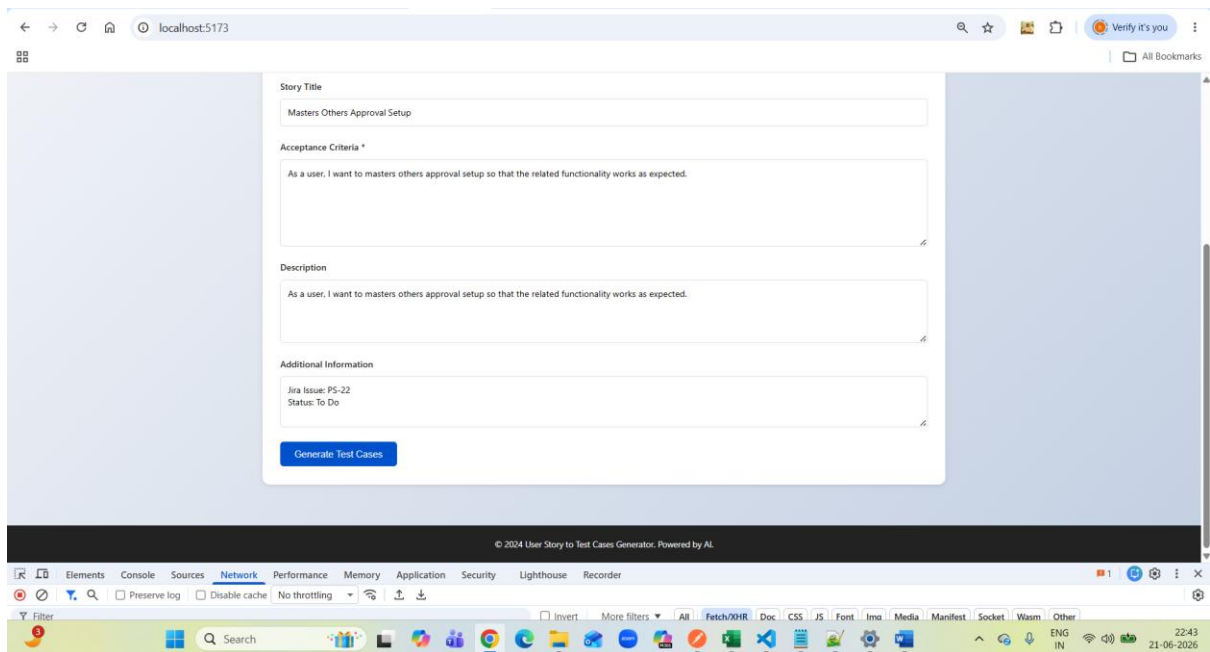

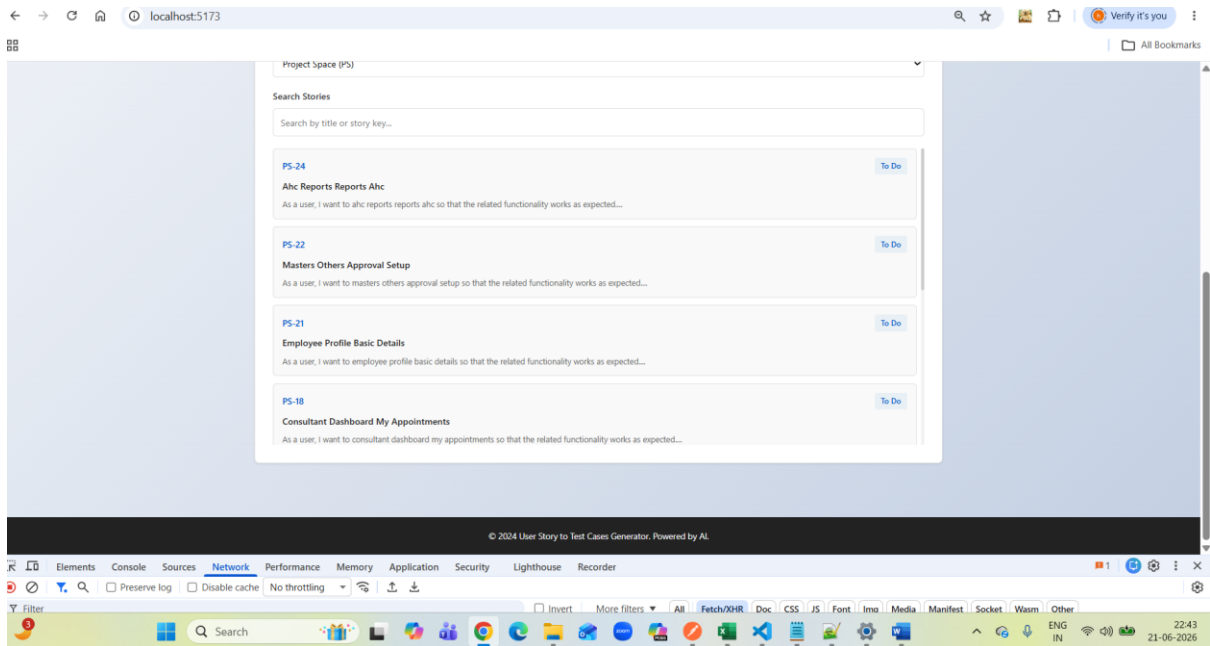

- POST /api/jira/connect - Test connection
- GET /api/jira/projects - List projects
- GET /api/jira/stories/:projectKey - Get stories
- GET /api/jira/issue/:issueKey - Get single issue
- POST /api/jira/search - Search with JQL
- POST /api/generate-tests - Generate test cases (existing)
